

**SERVER COMPONENT NETWORK RESOURCE ALLOCATION FOR HANDOFF
BETWEEN MOBILE SWITCHING CENTER PACKET-SWITCHED PORTION
AND MOBILE SWITCHING CENTER CIRCUIT-SWITCHED PORTION**

ABSTRACT

5 An apparatus in one example comprises a server component that sends one or more
signals to cause an allocation of one or more network resources for an active call terminated
to a mobile telephone upon initiation of a handoff. The handoff is between a packet-switched
portion of a mobile switching center and a circuit-switched portion of a mobile switching
center. The one or more network resources provide a translation between the packet-
10 switched portion of the mobile switching center and the circuit-switched portion of the
mobile switching center.
